

# **Tree days of entrepreneurship at Enset mohammedia.**

The three days of entrepreneurship organized in our school were an unforgettable experience for the students. This initiative was an opportunity for participants to develop their entrepreneurial spirit, creativity, technical expertise, and communication skills. The various competitions organized, such as the hackathon and ideathon, allowed students to tackle stimulating challenges, work in teams, and propose innovative solutions to meet society's needs.

The English public speaking competition was another highlight of these three days. Participants had the opportunity to perfect their English communication, an essential skill in the business world. This exercise allowed them to work on their eloquence, oral fluency, and ability to communicate effectively in English, which is a considerable asset for their future career.

The organized conferences were also very enriching for the participants. The topics covered, such as employability and stress management, allowed students to better understand the issues in the professional world and prepare for their future careers. These conferences also offered an opportunity to meet professionals and exchange ideas with them.

These three days of entrepreneurship were a real opportunity for students to discover their entrepreneurial potential. By working in teams on innovative projects, they learned to collaborate, solve complex problems, and take initiatives. These skills are essential for succeeding in the business world and will be very useful for their future careers.

This event allowed students to discover new interesting topics and reflect on important issues for the business world, such as corporate social responsibility and sustainable development. By allowing them to reflect on these issues now, this initiative prepares them to be responsible and engaged actors in the business world.

Despite this success, the event had its weaknesses, only a few people accepted the invitation, the same goes for the school winner, same body came to share their experience with the students. Since several conferences take place at the same time, an engineering student, for example, only has to decide on one choice, although he would like to attend both conferences, for example. The last thing to pay attention to is that the organization of hackathon conferences should be reconsidered as it lacks many things that can damage the school's image.

In conclusion, these three days of entrepreneurship were an educational, stimulating, and fun experience for all participants. The competitions and conferences allowed students to challenge themselves, develop their skills, and discover new interesting topics. We hope that this event will be repeated in the future to continue to stimulate the entrepreneurial spirit of students and prepare them for success in the business world.

# Critical English course.

English is the international language. Many people in the world speak English. Many technologies are available in English. English has thus become an important language alongside the mother tongue. Technologies developed by engineers. Therefore, English is very important for an engineer and an engineering student. English courses are therefore very important to me.

During these two years at Enset I study English for two hours a week, learning a lot of things from the first semester when the course focuses on reading and grammar rules, and it also gives me the opportunity to improve my public speaking skills improve Speak in 5 minutes on the topic of the power of words without any support. Just presente what you see on this topic.

The one section is complemented by the two, it focuses on writing. Language and grammar courses continue in this section. At the same time, a writing course begin. Learning the difference between "paragraphe" and "easy" and trying to write an easy about teaching digital skills to all critizens will definitely have a positive impact on their lives. I learned a lot from your comments on this assignment. This second one is not finished yet and is still an e-commerce presentation when I realize the importance of group work, sharing and the way you manage your public presentation between each group of members.

In the second year of enset, the section tree begins with the choice of a vlog topic. This is my first opportunity to contribute to this perspective and my first camera contact to present an English language topic on online reputation management. This topic is very important for our engineers to get the tips on how to manage your LinkedIn account, protect your online reputation and more. What followed was a discussion of the entire vlog. That's the most important thing this semester: I learn to defend my idea and to discuss it with other people. At the same time, the grammar and reading course and the preparation for the English exam continue.

Finally, the fourth section has not only become informative, but also offers a lot of information about working life. For me, this is the most important section in the whole course as I learn more about the internship, Resume , CV, LinkedIn account and also build my portfolio. This is what I need not only for graduation but also for the next part of my career.

In summary, English courses can be very good, but I would like to point out that the discussion starts in the classroom, there are difficult topics and the students have no further information about them. So that you don't know what to say to take part in the discussion, the second point concerns the creation of an e-learning platform that can be used in school to follow the progress of students in the language phase also administer exams and proposed the courses that must be attended to improve the language level of the students.

# Try to achieve the dream

As an engineer specializing in BIG DATA and cloud computing also a full stack developer java and angular, my professional ambition is to secure a top position in Canada. My passion for information technology, coupled with my desire to learn and grow professionally, motivates this objective. I am also driven to contribute to the development of innovative solutions in the field of computer science.

Canada is a country that offers numerous opportunities for information technology professionals, especially those specializing in BIG DATA, cloud computing and developer a software solution. Canadian companies are increasingly focused on innovation and digital transformation, which creates new challenges and opportunities for IT professionals.

Working in top positions in Canada would afford me the opportunity to collaborate with industry experts, discover new technologies, and contribute to the development of solutions that could change the way we live and work. I also hope to acquire new skills and knowledge in a dynamic and collaborative work environment.

However, achieving this objective requires effort, determination, and perseverance. I am willing to invest in my education and professional development to improve my skills and prepare for the challenges of the industry. I am also aware of the importance of maintaining a positive attitude and being open to opportunities that arise.

In conclusion, my professional goal is to work in top positions in Canada Whether as an engineer specializing in BIG DATA and cloud computing or an engineer fullstack developer java angular. I am determined to work hard, stay committed, and continuously develop myself to achieve this objective. I am confident that this experience will allow me to realize my full potential and positively contribute to the computer science industry.
